

a coolant flow outlet sized to receive the lower tie plate of a fuel bundle; and  
a coolant flow bore extending between said coolant flow inlet and said coolant flow outlet, said coolant flow inlet offset from said coolant flow outlet so that a centerline of said coolant flow inlet is parallel to a centerline of said coolant flow outlet.

9. (twice amended) A core for a nuclear reactor comprising:  
a plurality of fuel bundles, each fuel bundle comprising a lower tie plate;  
a plurality of cruciform shaped control rods;  
a plurality of cruciform shaped control rod guide tubes; and  
a core plate assembly comprising:  
a flat plate;  
a plurality of support beams, said flat plate positioned on top of said support beams;  
a plurality of control rod guide tube openings, each said guide tube opening sized to receive a control rod guide tube; and  
a plurality of fuel supports extending through said flat plate, each said fuel support comprising:  
a coolant flow inlet;  
a coolant flow outlet sized to receive the lower tie plate of a fuel bundle; and  
a coolant flow bore extending between said coolant flow inlet and said coolant flow outlet, said coolant flow inlet offset from said coolant flow outlet so that a centerline of said coolant flow inlet is parallel to a centerline of said coolant flow outlet.
